		Kevin M. Burd	2631						
Period f	The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply								
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.  - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.  - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).  - Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Application/Control Number: 09/180,691 Page 2

Art Unit: 2631

1. This office action, in response to the remarks filed 5/16/2005, is a final office action.

### Response to Arguments

2. Applicant's arguments filed 5/16/2005 have been fully considered but they are not persuasive. Applicant states Pressel does not disclose all of the claimed limitations. The examiner disagrees. As stated in the previous rejection, Pressel discloses roadside transmitters transmit signals containing location data for determining vehicle position and direction of travel (column 4, lines 25-34). Transmitters also transmit messages that are location specific (column 5, lines 40-65). This is the selection data. These messages are indicative of the respective region and contain traffic or weather information (column 6, lines 38-48). The location of the vehicle (as determined by the location data) is compared to the intended location found in the location specific message (selection data). When a match occurs in this comparison, the selection data is selected and output to the user (abstract and column 5, lines 61-65). Therefore, a method and receiver for geographically selecting digitally coded messages are disclosed that compares location data to selection data. For these reasons and the reasons stated in the previous office action, the rejections of the claims are maintained and stated below.

#### Information Disclosure Statement

3. The information disclosure statement (IDS) submitted on 6/27/2005 is being considered by the examiner.

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 4. Claims 13-24 are rejected under 35 U.S.C. 102(e) as being anticipated by Pressel et al (US 5,900,825).

Regarding claims 13 and 23, Pressel discloses an apparatus and a method for geographically selecting digitally coded messages that are emitted from a plurality of transmitters. The transmitters transmit digitally coded messages containing vehicle location data (location data) and these digitally coded messages are received in the vehicles (column 4, lines 25-34). These messages are location specific (column 5, lines 40-65) and this location specific information is the "selection data". This "selection data" will be indicative of a respective transmission region of one of the roadside transmitters such as traffic, weather, detour information, etc. (column 6, lines 38-48). The receiver system on the vehicle compares the position of the vehicle to the intended location

Application/Control Number: 09/180,691

Art Unit: 2631

indicated by each message (column 3, lines 52-54). If a match occurs, the information will be provided to the operator of the vehicle (abstract and column 5, lines 61-65).

Regarding claim 14, each encoded digital message includes some digital information that identifies a location for which the message is destined (column 10, lines 30-33). The transmitter transmitting the message will be found in its transmission region.

Regarding claim 15, each encoded digital message includes some digital information that identifies a location for which the message is destined (column 10, lines 30-33). Pressel discloses considering a coordinate position system (column 8, lines 51-67).

Regarding claim 16, a number of transmitters will transmit identical information if a wider area requires the information. For example, when transmitting weather information, more than one roadside transmitter will be contained inside say a thunderstorm and the transmitters will need to communicate the weather to a vehicle for many miles.

Regarding claim 17, the messages are location specific (column 5, lines 40-65) and this location specific information is the "selection data". This "selection data" will be indicative of a respective transmission region of one of the roadside transmitters such as traffic, weather, detour information, etc. (column 6, lines 38-48). This "selection data" is the "reference data".

Regarding claim 18, each encoded digital message includes some digital information that identifies a location for which the message is destined (column 10, lines

Art Unit: 2631

30-33). These messages are location specific (column 5, lines 40-65) and this location specific information is the "selection data". This "selection data" will be indicative of a respective transmission region of one of the roadside transmitters such as traffic, weather, detour information, etc. (column 6, lines 38-48).

Regarding claim 19, each encoded digital message includes some digital information that identifies a location for which the message is destined (column 10, lines 30-33). Pressel discloses considering a coordinate position system (column 8, lines 51-67).

Regarding claims 20 and 21, each encoded digital message includes some digital information that identifies a location for which the message is destined (column 10, lines 30-33).

Regarding claim 22, each encoded digital message includes some digital information that identifies a location for which the message is destined (column 10, lines 30-33). Pressel discloses considering a coordinate position system (column 8, lines 51-67).

Regarding claim 24, the receiver system receives signals in a proper order to select the correct digitally coded messages (column 8, lines 51-67).

#### Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kevin M. Burd whose telephone number is (571) 272-3008. The examiner can normally be reached on Monday - Friday 9 am - 5 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mohammad Ghayour can be reached on (571) 272-3021. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
